How has China developed the energy storage industry?The Chinese government has promulgated many policies to promote the development of energy storage. The energy storage industry had ushered in a period of development with the release of the 13th Five Year Plan (National Development and Reform Commission, ; China Energy Storage Alliance,). Can China commercialize energy storage industry?From to , China experienced a preliminary exploration period for the commercialization of energy storage industry. The National Energy Administration promulgated the "Guiding Opinions on Promoting Energy Storage Technology and Industry Development ()," which first clarified the strategic position of energy storage. Do energy storage policies exist in China?A lack of systematic research specifically regarding energy storage policies in China still prevails. This paper summarizes the evolution of energy storage policies, in order to explore the development of the energy storage industry and discover the practical problems that must be solved. Is building energy storage a viable option in China?In addition, the opportunity of building energy storage in China is also analyzed , . However, because of the late start of China's energy storage industry, the comprehensive study for the whole industry is very few. We found a review which provided a relatively comprehensive analysis of the technical and economic issue of it. How a complex energy storage policy system has developed in China?The development of energy storage industry requires promotion of the government in the aspect of technology, subsidies, safety and so on, thereby a complex energy storage policy system has developed. A lack of systematic research specifically regarding energy storage policies in China still prevails. What are the development stages of China's energy storage industry?The main conclusions are as follows: 1) from to , China's energy storage industry experienced three development stages: the foundation stage, the nurturing stage and the commercialization stage. In , China's energy storage industry began to heat up. October marked the release of the first national-level policy on the energy storage industry, and the energy storage market took big steps towards commercialization.
