Why Highjoule Leads in Lithium Solutions

### Why Modern Batteries Fail Us

You know that feeling when your phone dies during an important call? Now imagine that happening to a hospital's backup power system. Current Li-ion batteries suffer from three critical flaws:

1. Thermal runaway risks (remember the 2023 Tesla Megapack fire in Arizona?)
2. Rapid capacity fade - up to 30% loss in first 18 months
3. Limited deep-cycle capability

Highjoule's engineers discovered something fascinating though - 83% of premature failures trace back to electrolyte instability under load. Which brings us to...

### The TDS Chemistry Breakthrough

TDS (Thermal Diffusion Stabilization) isn't just another battery buzzword. our proprietary layered cathode structure acts like a thermal traffic controller. During extreme discharge cycles, it...

"Think of it as shock absorbers for electron flow - reducing hotspots by up to 60% compared to standard NMC cells."

- Dr. Lena Park, Highjoule Chief Electrochemist

### Technical Sweet Spot

Our TDS lithium batteries achieve what others can't:

200% faster thermal dissipation  
5,000+ full cycle lifespan (verified by UL testing)

# TDS Lithium-Ion Batteries Redefined

---

-40°C to 65°C operational range

Wait, no - correction: That's 5,000 cycles while maintaining 80% capacity. Most competitors hit that threshold at 3,000 cycles.

## Microgrid Case Study: 72-Hour Resilience

When Hurricane Lidia knocked out Puerto Rico's grid last September, our TDS-powered microgrid at San Juan Medical Center...

Metric Industry Standard TDS Performance

Outage Response 45 seconds 8 seconds

Peak Load Handling 85% rated capacity 112% sustained for 18h

The system supported full ICU operations for 73 continuous hours. That's not just battery performance - it's life-saving infrastructure.

## Beyond Basic Energy Storage

Here's where things get interesting. Our commercial clients are using TDS battery arrays for:

- o Frequency regulation (earning \$45/MWh in CAISO markets)
- o Solar smoothing for 50MW+ PV farms
- o Even hydrogen production timing

Take our partnership with SunPrairie Energy. By syncing their 200MW solar farm with Highjoule's 80MWh TDS storage...

"We've increased curtailment recovery by 19% compared to previous battery systems. That's \$2.8M annual revenue preserved."

- SunPrairie Plant Manager

## Why Highjoule Leads in Lithium Solutions

Since 2005, we've been redefining energy storage through:

1. Adaptive BMS Technology(TM) learning usage patterns
2. Hybrid liquid-cooled enclosures
3. Grid-as-a-Service financing models

## TDS Lithium-Ion Batteries Redefined

---

Our TDS battery line comes with a twist - literally. The interlock cell configuration allows on-site capacity upgrades. A hospital could start with 200kWh and expand to 2MWh without replacing core components.

### Maintenance That Makes Sense

Unlike competitors requiring quarterly check-ups, Highjoule's predictive analytics platform...

Let me share a quick story. Last month, our system detected abnormal impedance in Chicago data center's battery bank. Turned out a cooling fan was failing - fixed before it impacted operations. That's the power of...

So, is TDS chemistry perfect? Of course not. No battery is. But when your storage needs demand reliability through heatwaves, cold snaps, and once-in-a-century storms (which now happen every other year)...
