

What is the Technology Strategy assessment on thermal energy storage? This technology strategy assessment on thermal energy storage, released as part of the Long-Duration Storage Shot, contains the findings from the Storage Innovations (SI) strategic initiative. What are thermal storage technologies? Thermal storage technologies have the potential to provide large capacity, long-duration storage to enable high penetrations of intermittent renewable energy, flexible energy generation for conventional baseload sources, and seasonal energy needs. Thermal storage options include sensible, latent, and thermochemical technologies. How underground space can be used for storing thermal energy? There are different configurations available in which underground space can be utilized for storing thermal energy, which are aquifer storage, borehole storage, pit storage. Aquifer storage stores energy in the natural underground water reservoir and its surrounding porous matrix. Why is thermal energy storage important? The diurnal and intermittent nature of solar energy is one of the major challenges in the utilization of solar energy for various applications. The thermal energy storage system helps to minimize the intermittency of solar energy and demand-supply mismatch as well as improve the performance of solar energy systems. What are the advantages of solar energy storage materials? The better thermal conductivity, significant storage capacity, nonflammability, non-toxicity, and the lowest cost make these materials suitable for storing thermal energy in diverse solar applications such as solar power generation, solar cooking, desalination, and solar drying. What is the current trend of research in thermal energy storage? The description of recent developments of thermal energy storage technologies has also been included to represent the current trend of research in this area. The increase in global energy consumption and the depletion of conventional energy resources have triggered efforts to explore sustainable renewable energy resources.
