

# analysis report on the thermal energy storage industry chain

What is thermal energy storage? Thermal energy storage is a technology that enables the transfer and storage of heat energy or energy from ice, water, or cold air. This method is integrated into new technologies that complement solar and hydroelectric power sources. What are the main sources of thermal energy storage? The major sources for thermal energy storage include heat pumps and heat generated by power plants & waste. These storage systems reduce the demand for energy during peak hours, lower the carbon dioxide emissions, and decrease the energy consumption of end consumers. Why do European cities need a thermal energy storage system? Europe has been installing various thermal energy storage systems for a decade in the urban districts of countries like Spain, Austria, and Northern and Central Europe. The major driver of such a strategic step is the high energy consumption during winters and exploring renewable ways of district heating. What is a thermal energy segment? The segment comprises public services, such as broadband internet, transportation, telephone, sewage, water, natural gas, and electricity. Thermal energy is utilized to provide these public services at an extremely low cost. Cogeneration plants are employed to derive thermal energy and then convert it to the required form of energy. What is a thermal energy plant? Thermal energy plants are utilized to generate electrical energy to suffice the energy demand of the residential and commercial sectors. Electrical storage heaters and home storage units are also employed to store thermal energy in order to provide residential and commercial buildings with heating and cooling capacity as required. What is sun2store thermal energy storage? In January, the European Union and the European Investment Bank chose Malta Inc., the grid-scale thermal energy storage provider, to execute the Sun2Store thermal energy storage project in Spain. It is a 1,000-MWh/ten-hour energy storage system combining pumped heat technology with molten salt.
