

## capital power energy storage

Will Capital Power install a battery energy storage system? Capital Power is proposing a battery energy storage system (BESS) installation on a parcel of land which is owned by an affiliate of Capital Power and adjacent to the existing YEC. Operating independently of the YEC, the proposed facility would have up to 120 megawatts (MW) of power storage, with electrical energy output for up to four-hours. Is capital power proposing equipment upgrades at the YEC? Capital Power is proposing equipment upgrades at the YEC. Learn more about this project. Capital Power is proposing a battery energy storage system (BESS) installation on a parcel of land which is owned by an affiliate of Capital Power and adjacent to the existing YEC. Should energy storage be included in the electric grid? Integrating storage in the electric grid, especially in areas with high energy demand, will allow clean energy to be available when and where it is most needed. As New York continues to invest and build a cleaner grid, energy storage will allow us to use existing resources more efficiently and phase out the dirtiest power plants. Capital Power and its partner Manulife are proposing a battery energy storage system (BESS) installation that would provide up to 120 megawatts (MW) of power storage, with electrical energy output for up to four-hours. The BESS will be located north of the existing YEC facility, on a separate parcel of land municipally referred to as 18815 Dufferin Street (44., -79.), Township of King, Regional Municipality of York. The Project will encompass an area approximately 1.5 hectares. The BESS will consist of interconnected, weather-proof enclosures containing numerous modular lithium-ion batteries that convert chemical energy into electrical energy. In August 2017, Capital Power began construction of a battery energy storage system (BESS) installation of up to 120 megawatts (MW) of power storage, with electrical energy output for up to four-hours. Commercial operation of the York BESS is anticipated in August 2018. In August 2017, Capital Power began construction of a battery energy storage system (BESS) installation of up to 120 megawatts (MW) of power storage, with electrical energy output for up to four-hours. Commercial operation of the York BESS is anticipated in August 2018. In August 2017, Capital Power began construction of a battery energy storage system (BESS) installation of up to 120 megawatts (MW) of power storage, with electrical energy output for up to four-hours. Commercial operation of the York BESS is anticipated in August 2018. The project will be located in York Region, Ontario. We drive projects with sustainable energy storage technologies, to ensure the integration of renewable energy into the energy system, that guarantee energy supply and quality to our customers. What is energy storage? It consists of systems or equipment that enable energy to be stored so it can be used when needed. Ever wondered how your smartphone stays charged during a blackout or how solar farms keep lights on after sunset? Enter the capital energy storage industry - the unsung hero of our electrified world. With a market value soaring past \$33 billion globally [1], this sector isn't just about batteries. Capital Power is proposing a battery energy storage system (BESS) installation on a parcel of land which is owned by an affiliate of Capital Power and adjacent to the existing YEC. Operating independently of the YEC, the proposed facility would have up to 120 megawatts (MW) of power storage, with electrical energy output for up to four-hours. October 22, 2017 - A new battery energy storage facility has broken ground in York Region, Ontario that, when completed, will be capable of storing up to 120 MW of electricity, with
