Are there safety standards for batteries for stationary battery energy storage systems? This overview of currently available safety standards for batteries for stationary battery energy storage systems shows that a number of standards exist that include some of the safety tests required by the Regulation concerning batteries and waste batteries, forming a good basis for the development of the regulatory tests. Can FEMP assess battery energy storage system performance? This report describes development of an effort to assess Battery Energy Storage System (BESS) performance that the U.S. Department of Energy (DOE) Federal Energy Management Program (FEMP) and others can employ to evaluate performance of deployed BESS or solar photovoltaic (PV) +BESS systems. What are the gaps in energy storage safety assessments? One gap in current safety assessments is that validation tests are performed on new products under laboratory conditions, and do not reflect changes that can occur in service or as the product ages. Figure 4. Increasing safety certainty earlier in the energy storage development cycle. 8. Summary of Gaps What's new in energy storage safety? Since the publication of the first Energy Storage Safety Strategic Plan in , there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices. What are the three pillars of energy storage safety? A framework is provided for evaluating issues in emerging electrochemical energy storage technologies. The report concludes with the identification of priorities for advancement of the three pillars of energy storage safety: 1) science-based safety validation, 2) incident preparedness and response, 3) codes and standards. What is an energy storage system (ESS)? Covers an energy storage system (ESS) that is intended to receive and store energy in some form so that the ESS can provide electrical energy to loads or to the local/area electric power system (EPS) when needed. Electrochemical, chemical, mechanical, and thermal ESS are covered by this Standard.
