What is a microgrid energy system? Microgrids are small-scale energy systems with distributed energy resources, such as generators and storage systems, and controllable loads forming an electrical entity within defined electrical limits. These systems can be deployed in either low voltage or high voltage and can operate independently of the main grid if necessary. How do energy storage systems help a microgrid? Energy storage systems facilitate renewable energy transition (Kooshknow et al.,), and combined with agent-based models, can balance the microgrid supply and demand (Nunna et al.,). Recent works have focused on resilience strategies as a means of providing energy security. What is the future perspective of microgrid systems? Demonstrates the future perspective of implementing renewable energy sources, electrical energy storage systems, and microgrid systems regarding high storage capability, smart-grid atmosphere, and techno-economic deployment. Are microgrids the future of energy storage? A World Energy Council report showed that energy storage capacity doubled between and , reaching 8 GWh. The current projection is that there will be 230 GW of energy storage plants installed by [2-5]. Microgrids are a means of deploying a decentralized and decarbonized grid. Does NREL support a microgrid battery energy storage system? NREL supported the development and acceptance testing of a microgrid battery energy storage system developed by EaglePicher Technologies as part of an effort sponsored by U.S. Northern Command. The three-tiered, 300-kW/386-kWh grid-tied system is capable of providing grid stabilization, microgrid support, and on-command power response. Can community microgrid deployment improve energy security in rural areas? The integration of ABMs and ESS is a fundamental aspect for energy security, while LEMs can empower community members. Moreover, small scale energy markets aided with ABMs can boost energy security. Finally, we propose that higher education campuses better understand community microgrid deployment in rural areas.
