How can big data industrial parks improve energy storage business model? Combined with the energy storage application scenarios of big data industrial parks, the collaborative modes among different entities are sorted out based on the zero-carbon target path, and the maximum economic value of the energy storage business model is brought into play through certain collaborative measures. Can shared energy storage be used in industrial parks? 2. Literature review With the emergence of ESS sharing, shared energy storage (SES) in industrial parks has become the subject of much research. Sæther et al. developed a trading model with peer-to-peer (P2P) trading and SES coexisting for buildings with different consumption characteristics in industrial areas. What are the advantages of hybrid energy storage in industrial parks? The advantages of the hybrid energy storage system in industrial parks were also discussed in terms of sustainable development, climate change mitigation, social impact, and other aspects. How can energy storage benefits be improved? By adjusting peak and valley electricity prices and opening the FM market, energy storage benefits can be greatly improved, which is conducive to promoting the development of zero-carbon big data industrial parks, and technical advances are beneficial for reducing investment costs. Why is energy storage system installation important? Although energy storage system (ESS) installation is an effective means of addressing the uncertainty problem of RESs and load demand, , , , guaranteeing the stable and efficient operation of the industrial park's power system, cost inefficiency remains the main factor restricting ESS development. What is the optimal ESS-sharing scheme in an industrial park? In the industrial park environment, ESS sharing has multiple schemes that involve different ESS installation structures and energy-sharing methods. Therefore, this study determines the optimal ESS-sharing scheme in an industrial park through the construction of load optimization model and comparative analysis.
