How much power does a pumped storage plant use in Italy? In Italy, the existing pumped storage plants have a rated discharging power of about 7.6 GW and an energy capacity of about 53 GWh, with an average storage duration of about 7 hours.<sup>13</sup> However, some plants show a clear disparity between rated charging power and rated discharging. How many battery systems are there in Italy? Analysing the installed situation in Italy, we observe that to date there are mainly small-scale batteries (more than 350,000 systems with an average rated power of about 8kW) connected to the low-voltage grid, typically coupled with rooftop solar photovoltaics to maximise self-consumption and having a nominal storage duration of less than 2 hours. Are lithium-ion batteries and pumped hydroelectric storage a reference technology? Therefore, the reference technologies for this study are lithium-ion batteries and pumped hydroelectric storage. Both technologies can offer the services required for the integration of renewables and the efficient operation of the electricity system.
