What is a typical business strategy for large-scale solar thermal systems in Germany? Another typical business strategy for large-scale solar thermal systems in Germany is the change from fossil fuels to renewable energies in DH systems. One regulatory reason for this effort is the reduction of the primary energy factor of the DH network. What is a large-scale solar thermal system? The most common application of large-scale solar thermal systems is heat supply to DH networks and local heating networks with residential, commercial and public buildings, which makes up 88% of the total installed and operated capacity. Solar process heat, which is mainly used in the mining, textile and food industry, amounts to 12% . Which countries use underground solar heat storage? In recent years, underground solar heat storage has been widely developed around the world with more and more attention to the energy and environmental protection. The United States, Germany, Sweden, Denmark and Japan represent the highest level of research and application in this field , , . Can solar energy storage be used in winter? Seasonal heat storages can be used both for solar heat and for excess electricity converted to heat, which increases the number of load cycles and reduces the cost of storages . Seasonal thermal energy storage systems should be further analyzed to make solar heat available in winter . What types of thermal storage systems have been demonstrated in Germany? Many types of thermal storage system have been demonstrated in Germany. The Rostock project is the first ATES central heating system in Germany, with solar heat collecting area of square meters, 108 apartments and heating area of square meters (as shown in Fig. 7). When was thermal energy storage invented? The concept of thermal energy storage (TES) can be traced back to early 19th century, with the invention of the ice box to prevent butter from melting (Thomas Moore, An Essay on the Most Eligible Construction of Ice-Houses, Baltimore: Bonsal and Niles,). A "world-first" solar methanol production facility - providing green fuels for the shipping and aviation industry - to be built in Port Augusta, taking heat and electricity from what is hoped to be the country' first large scale solar thermal project.
