

What is the implementation plan for the development of new energy storage? In January, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system. How will energy storage affect New York's energy grid? In June, New York's Public Service Commission expanded the goal to 6,000 MW by . Storage will increase the resilience and efficiency of New York's grid, which will be 100% carbon-free electricity by . Additionally, energy storage can stabilize supply during peak electric usage and help keep critical systems online during an outage. Which energy storage projects have a low utilisation coefficient? According to a survey by the China Electricity Council, new energy distribution and storage projects have a low equivalent utilisation co-efficient of 6.1%, the lowest among the application scenarios, while the average for electrochemical energy storage projects is 12.2% (Figure 8). How big will electrochemical energy storage be by ? Based on CNESA's projections, the global installed capacity of electrochemical energy storage will reach .9GWh by , with a CAGR of 61% between and , which is twice as high as that of the energy storage industry as a whole (Figure 3). How much money did energy storage companies raise in ? In , they accounted for 90% of global energy storage-related fundraising deals (China for 46%, the US for 31%, and Europe for 13% respectively), raising USD 2.9 billion, USD 2 billion, and USD 800 million, respectively (Figure 4). Are independent energy storage stations a good investment? This does not augur well for the market in terms of long-term competition. There will be safety risks associated with excessive cost control and an indifference to quality. Independent energy storage stations enjoy good long-term prospects, though this segment is sluggish in the short term.
