As a certified regulatory program, the CEC does not prepare environmental impact reports (EIRs) in an AFC proceeding, but instead prepares environmental assessment documents that are functionally equivalent to EIRs. Is depth a concern for Dr-CAES energy storage? Depth is not a concern: the entry pressure, and higher associated well costs. The authors suggest that grid-scale storage, would require 15-215;10 m for 150 - 200 MWh provided over 8 - 10 hours. CAES. Similar to PA-CAES, the energy storage capacity of DR-CAES will depend on the air volume that aggregate mass flow capacity (Allen et al.,).
