Should Eswatini invest in natural gas and biogas? Natural gas and biogas also should be considered as viable options in the future energy mix. Under the business-as-usual pathway to 2030, Eswatini's dependency on fuel and electricity imports remains high, while domestic renewable energy resources remain under-utilised. Does Eswatini need a new energy? At the same time, the energy supply structure in Eswatini needs to expand; oil imports are expected to grow by 30 % to 60 % within the planning horizon (depending on the scenarios), while electricity production needs to grow by 90 % to 180 %. Why is Eswatini a risky importer of electricity? Eswatini is a net importer of electricity, which poses a risk for energy security. Electricity prices vary greatly, with much of the variability reflecting the relative ease of energy supply and the extent to which electricity prices are subject to government control. Why are fuel efficiency standards important in Eswatini? To a degree, these standards are progressively imported, helping to improve the average fuel efficiency of vehicles in Eswatini. Diesel accounts for 60 % of the total demand for oil in the transport sector, and petrol accounts for 40 %. Energy demand in the sector is expected to increase by almost 50 % in the projected planning horizon. Will Eswatini achieve universal electricity access by 2030? Household electricity access stood at 74 % in 2014; Eswatini aims to achieve universal access to electricity by 2030, as part of the National Development Strategy and also supported by the country's Sustainable Energy for All goals. What are the domestic resources in Eswatini? The domestic resources from hydro, wind, solar, biomass and coal are distributed across Eswatini and could provide affordable and secure supplies of energy and meet the country's electricity demand. The Domestic Resources scenarios assess the implications of becoming less import-dependent and maximising the domestically endowed energy resources. Africa Growth Opportunity Act Combined heat and power Carbon dioxide Central Statistics Office Concentrated solar power Gross domestic product Geographic This Chapter reviews existing energy targets and other relevant development goals currently in place in Eswatini. The Energy Masterplan is built on these goals, and the For this reason, renewables will be the driving force of the Kingdom of Eswatini's energy transformation, while permitting affordable energy, enabling universal access to modern energy, increasing energy security and diversifying energy supply. For this reason, renewables will be the driving force of the Kingdom of Eswatini's energy transformation, while permitting affordable energy, enabling universal access to modern energy, increasing energy security and diversifying energy supply. The Kingdom of Eswatini, previously known as the Kingdom of Swaziland, officially changed its name on 19 April 2018.
