

## the scale of new energy storage installed capacity hits a new high

How big is energy storage in ?By the end of , the cumulative installed and operational capacity of new energy storage projects nationwide reached 73.76 GW/168 GWh, approximately 20 times that of the end of the 13th Five-Year Plan and more than 130% higher than at the end of . Which region has the most energy storage capacity?The distribution of installed capacity by region was as follows: North China (30.1%), Northwest China (25.4%), East China (16.9%), Central China (14.7%), Southern China (12.4%), and Northeast China (0.5%). New energy storage stations are increasingly centralized and large-scale. Will China's new energy storage sector grow in ?BEIJING -- China's new energy storage sector has seen a rapid growth in , with installed capacity surpassing 70 million kilowatts, said an official with the National Energy Administration (NEA). What is new energy storage?New energy storage refers to energy-storage technologies other than conventional pump storage. An energy-storage system charges when wind power or photovoltaic power generates a large volume of electricity or when the power consumption is low, and it discharges otherwise. China's operational efficiency of new energy storage continues to improve. How much energy storage does China have in ?By the end of , China had completed and put into operation a cumulative installed capacity of new type energy storage projects reaching 31.4GW / 66.9GWh, with an average storage duration of 2.1 hours. The newly added installed capacity in was approximately 22.6GW / 48.7GWh, which is three times that for (7.3GW / 15.9GWh). Is China entering a new era of energy storage demand?Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change. By the end of , the cumulative installed and operational capacity of new energy storage projects nationwide reached 73.76 GW/168 GWh, approximately 20 times that of the end of the 13th Five-Year Plan and more than 130% higher than at the end of . By the end of , the cumulative installed and operational capacity of new energy storage projects nationwide reached 73.76 GW/168 GWh, approximately 20 times that of the end of the 13th Five-Year Plan and more than 130% higher than at the end of . In , new energy storage continued its rapid development, with installed capacity surpassing 70 GW. By the end of , the cumulative installed and operational capacity of new energy storage projects nationwide reached 73.76 GW/168 GWh, approximately 20 times that of the end of the 13th According to incomplete statistics from the CNESA DataLink Global Energy Storage Database, as of the end of June , China's cumulative installed capacity of power storage reached 164.3GW, a year-on-year increase of 59%. This year marks the final year of the '14th Five-Year Plan.' Compared with BEIJING -- China's new energy storage sector has seen a rapid growth in , with installed capacity surpassing 70 million kilowatts, said an official with the National Energy Administration (NEA). Bian Guangqi, deputy director of the NEA's energy saving and technology equipment department said China has published a national plan to promote large-scale energy storage facilities, encouraging investment and broader participation in the electricity market. The 'Special action plan for large-scale construction of new energy storage (-)' was published last Friday (12 September) Announced by

the National Development and Reform Commission (NDRC) and the National Energy Administration (NEA), the new plan is expected to drive CNY 250 billion (\$35.1 billion) in sector investment. From ESS News China aims to install more than 100 GW of new energy storage - primarily battery According to China's National Energy Administration (NEA), by the end of , the total installed capacity of new energy storage projects in China reached 73.76 million kilowatts, representing an increase of over 130 percent compared to the end of . China has emerged as a global leader in new Installed Capacity Reaches 168 GWh with 130% Growth: Chinese By the end of , the cumulative installed and operational capacity of new energy storage projects nationwide reached 73.76 GW/168 GWh, approximately 20 times that CNESA Major Release on the 10th Western China Energy In the first half of , newly commissioned new energy storage projects reached 23.03GW/56.12GWh, with both power and energy scales increasing 68% year-on-year. China's new energy storage capacity exceeds 70m KWBEIJING -- China's new energy storage sector has seen a rapid growth in , with installed capacity surpassing 70 million kilowatts, said an official with the National Energy China targets 180GW of installed BESS capacity by 7 ????&#; The policy and regulatory roadmap is aimed at pushing China's installed base of large-scale energy storage - primarily lithium-ion battery energy storage systems (BESS) - to China targets 180 GW of new energy storage by in 5 ???&#; China aims to install more than 100 GW of new energy storage - primarily battery storage, excluding pumped hydro - by , according to a new action plan presented by the scale of new energy storage installed capacity hits a new highChina aims to further develop its new energy storage capacity, which is expected to advance from the initial stage of commercialization to large-scale development by , with an installed China leads the world in new-type energy storage capacity5 ???&#; According to China's National Energy Administration (NEA), by the end of , the total installed capacity of new energy storage projects in China reached 73.76 million kilowatts, CHINA'S ACCELERATING GROWTH IN NEW TYPE By the end of , China had completed and put into operation a cumulative installed capacity of new type energy storage projects reaching 31.4GW / 66.9GWh, with an average storage Global Energy Storage Growth Upheld by New MarketsThe global energy storage market is poised to hit new heights yet again in . Despite policy changes and uncertainty in the world's two largest markets, the US and China, the sector continues to grow as developers US energy storage set a new record in Q1 but US energy storage set a Q1 record in with 2 GW added, but looming policy changes could put that growth at serious risk.CNESA Major Release on the 10th Western China Energy Storage New Energy Storage Added 23.03GW/56.12GWh In the first half of , newly commissioned new energy storage projects reached 23.03GW/56.12GWh, with both power Residential Energy Storage Installations Hit All-Time High in USAThis additional storage capacity is helping meet increasing energy demand and is supporting growing industries like manufacturing and data centers," said Noah Roberts, was a fantastic year for energy storage | Canary In the waning days of this year, Texas was on track to have installed 4 gigawatts of grid-scale storage in , outpacing California's new battery construction by 12 percent, according to the

latest count by Wood Residential battery storage skyrockets in record The US battery storage market set another record in , according to a new report from the American Clean Power Association and Wood Mac. MONTHLY CHINA ENERGY UPDATE | February Combined total solar and wind power capacity hit a new record at 1,407GW, exceeding China's 14th Five Year Plan for Renewable Energy Development target of 1,200GW six years World's energy storage capacity forecast to exceed a Cumulative energy storage installations will go beyond the terawatt-hour mark globally before excluding pumped hydro, with lithium-ion batteries providing most of that capacity, according to new forecasts. Separate TrendForce: Global Installations Outlook for Energy Due to the acceleration of the global energy transition, energy storage has become a new focus for the energy sector. In the medium to long term, the growth of global energy storage installations may be guaranteed New report: European battery storage grows 15% in , EU energy 21.9 GWh of battery energy storage systems (BESS) was installed in Europe in , marking the eleventh consecutive year of record breaking-installations, and bringing US Energy Storage Hits New Highs The US energy storage market set a first-quarter record for capacity installed in Q1 , with MW deployed across all segments. This marks the highest storage capacity ever installed in a first quarter in the United The buildout report: Record high new capacity in Q4 Share The buildout report: Record high new capacity in Q4 In Quarter 4 of , 420 MW of new battery energy storage capacity became commercially operational in Great Britain. This Global energy storage market: review and outlookGlobal energy storage market The global energy storage market added 175.4 GWh of installed capacity in , with the three major regional markets--China, the U.S. Battery Storage Capacity Expanded 12.3 GW in The commercial, industrial and community-scale sectors added some 145 MW of battery capacity to augment energy projects. California, Massachusetts and New York Global Energy Storage Growth Upheld by New MarketsThe global energy storage market is poised to hit new heights yet again in . Despite policy changes and uncertainty in the world's two largest markets, the US and China, U.S. Energy Storage Market Sets Q3 Records with Rapid Growth Grid-scale energy storage reached 3,431 MW in Q3 , marking an 80% year-over-year increase, while residential storage hit an all-time high of 346 MW. Texas and Global energy storage market: review and outlookGlobal energy storage market The global energy storage market added 175.4 GWh of installed capacity in , with the three major regional markets--China, the U.S. Battery Storage Capacity Expanded 12.3 GW in The commercial, industrial and community-scale sectors added some 145 MW of battery capacity to augment energy projects. California, Massachusetts and New York accounted for nearly 90% of commercial, U.S. Energy Storage Market Sets Q3 Records with Grid-scale energy storage reached 3,431 MW in Q3 , marking an 80% year-over-year increase, while residential storage hit an all-time high of 346 MW. Texas and California led installations, reflecting a nationwide Summary of Global Energy Storage Market Tracking Figure 2: Cumulative installed capacity of new energy storage projects commissioned in China (as of the end of June ) In the first half of , China's new energy storage continued to develop at a high speed, with
