Which energy storage system is suitable for centered energy storage? Besides, CAES is appropriate for larger scale of energy storage applications than FES. The CAES and PHEs are suitable for centered energy storage due to their high energy storage capacity. The battery and hydrogen energy storage systems are perfect for distributed energy storage. Can energy storage meet all requirements simultaneously? Ideal energy storage is required to have high energy and power density, long cycle life, fast dynamic response etc. However, no existing energy storage can meet all requirements simultaneously [4, 5]. Fig. 1 presents the Ragone chart describing the power and energy density of different energy storage. What are the most popular energy storage systems? This paper presents a comprehensive review of the most popular energy storage systems including electrical energy storage systems, electrochemical energy storage systems, mechanical energy storage systems, thermal energy storage systems, and chemical energy storage systems. How much energy is stored in a power system? Based on these, for power systems with up to 95% renewables, the electricity storage size is found to be below 1.5% of the annual demand (in energy terms). While for 100% renewables energy systems (power, heat, mobility), it can remain below 6% of the annual energy demand. Why is energy storage important in electrical power engineering? Various application domains are considered. Energy storage is one of the hot points of research in electrical power engineering as it is essential in power systems. It can improve power system stability, shorten energy generation environmental influence, enhance system efficiency, and also raise renewable energy source penetrations. How big is electricity storage? A review of more than 60 studies (plus more than 65 studies on P2G) on power and energy models based on simulation and optimization was done. Based on these, for power systems with up to 95% renewables, the electricity storage size is found to be below 1.5% of the annual demand (in energy terms).
